wears a tie	brings up TET enzymes often	traveled/worked in Latin America	has worked with ancient DNA	annotates cell types manually
doesn't use social media	maintains public dataset repositories	uses 10+ color heatmaps in every figure	thinks everything is chromatin state	thinks bisulfite conversion is fun
DNA methylation enthusiast	loves conference freebies	brings their dog to lab	bioinformatics heavy user	gets excited about enhancers
has built a genome browser plugin	keeps a physical lab notebook	works only on human samples	computational pipeline hoarder	argues about enhancer-promoter loops
posts conference selfies	epigenetic clock developer	started as a physicist	has a non-science hobby they talk about	uses C. elegans

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

brings lunch from home every day	publishes in Nature Genetics	bioinformatics heavy user	first-gen academic	posts conference selfies
thinks everything is chromatin state	uses zebrafish	believes non-coding RNAs are the future	argues about enhancer-promoter loops	works on transgenerational inheritance
has built a genome browser plugin	uses dark mode for everything	makes memes about their field	works only on human samples	spends more time debugging than analyzing
speaks 3+ languages	histone modification researcher	has kids	suspiciously good at grant writing	gets excited about enhancers
published 2 papers during PhD	has worked with ancient DNA	loves conference freebies	keeps a physical lab notebook	uses ATAC-seq routinely

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

still uses Facebook	started as a physicist	coffee addict	vegan	keeps their lab notebook in LaTeX
has a custom genome build	has kids	has never used a pipette	always has a volcano plot in talks	loves conference freebies
runs marathons	posts conference selfies	works on transge nerational inheritance	works only on human samples	published 2 papers during PhD
suspiciously good at grant writing	regularly uses PCA, UMAP, and t-SNE	avoids cell culture at all costs	uses CRISPR/dCas9 for epigenetic editing	traveled/worked in Thailand
ChIP-seq veteran	works best after 10pm	philosophizes about science late at night	has built a genome browser plugin	uses 10+ color heatmaps in every figure

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

brings lunch from home every day	still uses Facebook	runs marathons	DNA methylation enthusiast	has built a genome browser plugin
uses CRISPR/dCas9 for epigenetic editing	quotes Waddington in presentations	loves conference freebies	maintains public dataset repositories	uses dark mode for everything
follows ENCODE religiously	doesn't use social media	works best after 10pm	wears a tie	thinks bisulfite conversion is fun
has never used a pipette	always has a volcano plot in talks	argues about enhancer-promoter loops	convinced nucleosome positioning is everything	has a favorite coffee mug
coffee addict	epigenetic clock developer	talks about the roman empire too much	first-gen academic	believes non-coding RNAs are the future

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

works with patient-derived organoids	works only on human samples	uses Hi-C data	thinks bisulfite conversion is fun	uses dark mode for everything
coffee addict	computational pipeline hoarder	speaks 3+ languages	uses C. elegans	brings their dog to lab
has lived in 3+ countries	does yoga	wears lab coats even at the desk	convinced nucleosome positioning is everything	still uses Facebook
uses 10+ color heatmaps in every figure	epigenetic clock developer	DNA methylation enthusiast	model organism expert	single-cell epigenomics specialist
uses ATAC-seq routinely	quotes Waddington in presentations	bakes for the lab	believes non-coding RNAs are the future	writes papers in Overleaf

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

single-cell epigenomics specialist	brings their dog to lab	loves conference freebies	has a favorite coffee mug	writes papers in Overleaf
follows ENCODE religiously	vegan	bioinformatics heavy user	works on transgenerational inheritance	tea-only person
believes RNA modifications are underrated	coffee addict	has kids	has collaborated with clinicians	works on frogs
plays a musical instrument	uses C. elegans	quotes Waddington in presentations	annotates cell types manually	convinced nucleosome positioning is everything
computational pipeline hoarder	uses methylome-wide association studies	DNA methylation enthusiast	runs marathons	gets excited about enhancers

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

has a science-themed tattoo	writes papers in Overleaf	published 2 papers during PhD	uses C. elegans	talks about the roman empire too much
plays a musical instrument	model organism expert	doesn't use social media	has built a genome browser plugin	uses dark mode for everything
spends more time debugging than analyzing	thinks bisulfite conversion is fun	computational pipeline hoarder	speaks 3+ languages	presents with t-SNE plots routinely
does yoga	tea-only person	argues about enhancer-promoter loops	works only on human samples	keeps their lab notebook in LaTeX
annotates cell types manually	uses methylome-wide association studies	bioinformatics heavy user	posts conference selfies	wears lab coats even at the desk

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

has a science-themed tattoo	has a favorite coffee mug	has worked with ancient DNA	uses 10+ color heatmaps in every figure	still uses Facebook
uses methylome-wide association studies	traveled/worked in Latin America	histone modification researcher	has built a genome browser plugin	brings lunch from home every day
uses dark mode for everything	has lived in 3+ countries	works only on human samples	computational pipeline hoarder	has never used a pipette
publishes in Nature Genetics	keeps their lab notebook in LaTeX	model organism expert	complains about batch effects daily	philosophizes about science late at night
coffee addict	always has a volcano plot in talks	uses ATAC-seq routinely	started as a physicist	uses CRISPR/dCas9 for epigenetic editing

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

bakes for the lab	loves conference freebies	works on transgenerational inheritance	uses dark mode for everything	has never used a pipette
tea-only person	has a science-themed tattoo	traveled/worked in Latin America	ChIP-seq veteran	philosophizes about science late at night
suspiciously good at grant writing	published 2 papers during PhD	married to another scientist	makes memes about their field	writes papers in Overleaf
has worked with ancient DNA	publishes in Nature Genetics	uses Hi-C data	uses 10+ color heatmaps in every figure	regularly uses PCA, UMAP, and t-SNE
has a non-science hobby they talk about	uses zebrafish	has collaborated with clinicians	uses AI for epigenetic feature prediction	believes RNA modifications are underrated

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

has worked with ancient DNA	argues about enhancer-promoter loops	histone modification researcher	presents with t-SNE plots routinely	still uses Facebook
wears a tie	uses 10+ color heatmaps in every figure	single-cell epigenomics specialist	uses ATAC-seq routinely	has lived in 3+ countries
traveled/worked in Thailand	avoids cell culture at all costs	published 2 papers during PhD	suspiciously good at grant writing	believes RNA modifications are underrated
complains about batch effects daily	has built a genome browser plugin	has a non-science hobby they talk about	bioinformatics heavy user	wears lab coats even at the desk
spends more time debugging than analyzing	brings up TET enzymes often	thinks bisulfite conversion is fun	married to another scientist	thinks everything is chromatin state

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

keeps a physical lab notebook	started as a physicist	advocates open science	works on frogs	loves conference freebies
has never used a pipette	ChIP-seq veteran	works only on human samples	always has a volcano plot in talks	has lived in 3+ countries
traveled/worked in Africa	wears a tie	works on transgenerational inheritance	has a custom genome build	published 2 papers during PhD
has a non-science hobby they talk about	has built a genome browser plugin	studies chromatin remodeling complexes	believes non-coding RNAs are the future	speaks 3+ languages
model organism expert	avoids cell culture at all costs	traveled/worked in Thailand	has kids	doesn't use social media

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

complains about batch effects daily	epigenetic clock developer	avoids cell culture at all costs	uses methylome-wide association studies	single-cell epigenomics specialist
doesn't use social media	maintains public dataset repositories	works on frogs	wears a tie	plays a musical instrument

thinks bisulfite conversion is fun	brings lunch from home every day	started as a physicist	computational pipeline hoarder	traveled/worked in Latin America
loves conference freebies	argues about enhancer-promoter loops	gets excited about enhancers	uses C. elegans	keeps their lab notebook in LaTeX
wears lab coats even at the desk	coffee addict	convinced nucleosome positioning is everything	developed their own peak caller	has a favorite coffee mug
married to another scientist	speaks 3+ languages	talks about the roman empire too much	bakes for the lab	epigenetic clock developer
uses Hi-C data	has never used a pipette	follows ENCODE religiously	advocates open science	wears a tie

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

philosophizes about science late at night	traveled/worked in Thailand	regularly uses PCA, UMAP, and t-SNE	convinced nucleosome positioning is everything	has a custom genome build
single-cell epigenomics specialist	does yoga	works best after 10pm	speaks 3+ languages	uses dark mode for everything
ChIP-seq veteran	suspiciously good at grant writing	doesn't use social media	has kids	computational pipeline hoarder
uses methylome-wide association studies	follows ENCODE religiously	avoids cell culture at all costs	bioinformatics heavy user	uses CRISPR/dCas9 for epigenetic editing
married to another scientist	gets excited about enhancers	has a science-themed tattoo	complains about batch effects daily	argues about enhancer-promoter loops

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

loves conference freebies	brings up TET enzymes often	computational pipeline hoarder	has never used a pipette	presents with t-SNE plots routinely
doesn't use social media	epigenetic clock developer	advocates open science	tea-only person	believes in 3D genome as the key
traveled/worked in Thailand	uses methylome-wide association studies	uses CRISPR/dCas9 for epigenetic editing	has a non-science hobby they talk about	has a favorite coffee mug
philosophizes about science late at night	vegan	has kids	uses dark mode for everything	developed their own peak caller
uses Hi-C data	avoids cell culture at all costs	annotates cell types manually	started as a physicist	suspiciously good at grant writing

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

started as a physicist	avoids cell culture at all costs	traveled/worked in Africa	model organism expert	brings up TET enzymes often
doesn't use social media	works best after 10pm	uses ATAC-seq routinely	gets excited about enhancers	keeps a physical lab notebook
publishes in Nature Genetics	believes non-coding RNAs are the future	posts conference selfies	complains about batch effects daily	has worked with ancient DNA
always has a volcano plot in talks	thinks bisulfite conversion is fun	suspiciously good at grant writing	convinced nucleosome positioning is everything	does yoga
believes in 3D genome as the key	uses methylome-wide association studies	histone modification researcher	brings their dog to lab	works only on human samples

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

works on transgenerational inheritance	brings their dog to lab	talks about the roman empire too much	loves conference freebies	uses 10+ color heatmaps in every figure
runs marathons	still uses Facebook	has lived in 3+ countries	convinced nucleosome positioning is everything	works only on human samples
has a favorite coffee mug	uses dark mode for everything	works best after 10pm	believes RNA modifications are underrated	uses AI for epigenetic feature prediction
publishes in Nature Genetics	has built a genome browser plugin	published 2 papers during PhD	always has a volcano plot in talks	believes non-coding RNAs are the future
complains about batch effects daily	wears a tie	bakes for the lab	has a science-themed tattoo	started as a physicist

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

developed their own peak caller	presents with t-SNE plots routinely	always has a volcano plot in talks	epigenetic clock developer	loves conference freebies
complains about batch effects daily	traveled/worked in Africa	has never used a pipette	wears a tie	convinced nucleosome positioning is everything
has a non-science hobby they talk about	plays a musical instrument	keeps a physical lab notebook	has built a genome browser plugin	uses methylome-wide association studies
coffee addict	makes memes about their field	speaks 3+ languages	regularly uses PCA, UMAP, and t-SNE	quotes Waddington in presentations
uses AI for epigenetic feature prediction	computational pipeline hoarder	follows ENCODE religiously	believes in 3D genome as the key	annotates cell types manually

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

has a favorite coffee mug	has built a genome browser plugin	gets excited about enhancers	tea-only person	argues about enhancer-promoter loops
started as a physicist	plays a musical instrument	makes memes about their field	has a non-science hobby they talk about	talks about the roman empire too much
maintains public dataset repositories	works only on human samples	annotates cell types manually	traveled/worked in Africa	epigenetic clock developer
uses C. elegans	runs marathons	regularly uses PCA, UMAP, and t-SNE	uses AI for epigenetic feature prediction	wears a tie
speaks 3+ languages	still uses Facebook	has lived in 3+ countries	uses zebrafish	uses methylome-wide association studies

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

doesn't use social media	traveled/worked in Thailand	thinks everything is chromatin state	uses 10+ color heatmaps in every figure	argues about enhancer-promoter loops
uses dark mode for everything	has a favorite coffee mug	has a science-themed tattoo	vegan	epigenetic clock developer
advocates open science	uses Hi-C data	works on transgenerational inheritance	believes non-coding RNAs are the future	presents with t-SNE plots routinely
works with patient-derived organoids	always has a volcano plot in talks	regularly uses PCA, UMAP, and t-SNE	has lived in 3+ countries	uses ATAC-seq routinely
traveled/worked in Africa	single-cell epigenomics specialist	complains about batch effects daily	first-gen academic	coffee addict

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

works with patient-derived organoids	uses 10+ color heatmaps in every figure	DNA methylation enthusiast	ChIP-seq veteran	has lived in 3+ countries
bakes for the lab	makes memes about their field	suspiciously good at grant writing	posts conference selfies	traveled/worked in Latin America
works only on human samples	uses Hi-C data	published 2 papers during PhD	bioinformatics heavy user	single-cell epigenomics specialist
argues about enhancer-promoter loops	annotates cell types manually	works on frogs	has collaborated with clinicians	thinks everything is chromatin state
wears lab coats even at the desk	uses ATAC-seq routinely	plays a musical instrument	runs marathons	regularly uses PCA, UMAP, and t-SNE

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

works only on human samples	suspiciously good at grant writing	works on transgenerational inheritance	has a favorite coffee mug	epigenetic clock developer
has worked with ancient DNA	argues about enhancer-promoter loops	uses dark mode for everything	works best after 10pm	coffee addict
bioinformatics heavy user	regularly uses PCA, UMAP, and t-SNE	spends more time debugging than analyzing	uses Hi-C data	traveled/worked in Thailand
tea-only person	traveled/worked in Latin America	quotes Waddington in presentations	has lived in 3+ countries	brings lunch from home every day
presents with t-SNE plots routinely	uses CRISPR/dCas9 for epigenetic editing	studies chromatin remodeling complexes	plays a musical instrument	uses ATAC-seq routinely

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

started as a physicist	model organism expert	gets excited about enhancers	wears a tie	single-cell epigenomics specialist
brings lunch from home every day	uses C. elegans	has never used a pipette	epigenetic clock developer	always has a volcano plot in talks
has lived in 3+ countries	convinced nucleosome positioning is everything	works only on human samples	uses dark mode for everything	runs marathons
complains about batch effects daily	has a favorite coffee mug	uses methylome-wide association studies	has built a genome browser plugin	speaks 3+ languages
uses Hi-C data	uses AI for epigenetic feature prediction	tea-only person	presents with t-SNE plots routinely	avoids cell culture at all costs

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

suspiciously good at grant writing	has lived in 3+ countries	wears a tie	traveled/worked in Africa	posts conference selfies
epigenetic clock developer	convinced nucleosome positioning is everything	always has a volcano plot in talks	computational pipeline hoarder	argues about enhancer-promoter loops
uses dark mode for everything	gets excited about enhancers	uses CRISPR/dCas9 for epigenetic editing	uses methylome-wide association studies	works best after 10pm
brings lunch from home every day	regularly uses PCA, UMAP, and t-SNE	developed their own peak caller	spends more time debugging than analyzing	runs marathons
makes memes about their field	publishes in Nature Genetics	has collaborated with clinicians	believes RNA modifications are underrated	complains about batch effects daily

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

brings up TET enzymes often	works on frogs	has collaborated with clinicians	studies chromatin remodeling complexes	advocates open science
has a non-science hobby they talk about	speaks 3+ languages	uses Hi-C data	uses methylome-wide association studies	publishes in Nature Genetics
brings lunch from home every day	works with patient-derived organoids	bioinformatics heavy user	presents with t-SNE plots routinely	has a custom genome build
epigenetic clock developer	loves conference freebies	always has a volcano plot in talks	uses ATAC-seq routinely	traveled/worked in Thailand
works on transgenerational inheritance	uses dark mode for everything	thinks bisulfite conversion is fun	wears lab coats even at the desk	coffee addict

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

traveled/worked in Africa	uses dark mode for everything	first-gen academic	spends more time debugging than analyzing	has kids
model organism expert	works with patient-derived organoids	suspiciously good at grant writing	annotates cell types manually	computational pipeline hoarder
always has a volcano plot in talks	started as a physicist	advocates open science	works only on human samples	has never used a pipette
thinks bisulfite conversion is fun	argues about enhancer-promoter loops	loves conference freebies	speaks 3+ languages	traveled/worked in Latin America
believes RNA modifications are underrated	has a non-science hobby they talk about	has a custom genome build	developed their own peak caller	brings lunch from home every day

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

DNA methylation enthusiast	has worked with ancient DNA	brings lunch from home every day	still uses Facebook	started as a physicist
single-cell epigenomics specialist	uses 10+ color heatmaps in every figure	works on transgenerational inheritance	uses Hi-C data	complains about batch effects daily
presents with t-SNE plots routinely	works with patient-derived organoids	traveled/worked in Latin America	traveled/worked in Thailand	works only on human samples
believes RNA modifications are underrated	annotates cell types manually	wears a tie	runs marathons	doesn't use social media
ChIP-seq veteran	regularly uses PCA, UMAP, and t-SNE	uses AI for epigenetic feature prediction	uses dark mode for everything	first-gen academic

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

avoids cell culture at all costs	makes memes about their field	quotes Waddington in presentations	traveled/worked in Latin America	uses C. elegans
developed their own peak caller	philosophizes about science late at night	complains about batch effects daily	started as a physicist	coffee addict
keeps their lab notebook in LaTeX	studies chromatin remodeling complexes	single-cell epigenomics specialist	brings lunch from home every day	loves conference freebies
regularly uses PCA, UMAP, and t-SNE	spends more time debugging than analyzing	works best after 10pm	posts conference selfies	has built a genome browser plugin
uses 10+ color heatmaps in every figure	uses methylome-wide association studies	uses dark mode for everything	first-gen academic	uses CRISPR/dCas9 for epigenetic editing

If you finish early, you can talk to one of the organizers to get a new bingo sheet.

brings lunch from home every day	quotes Waddington in presentations	philosophizes about science late at night	published 2 papers during PhD	makes memes about their field
uses methylome-wide association studies	works on frogs	plays a musical instrument	has kids	coffee addict
has a science-themed tattoo	married to another scientist	believes non-coding RNAs are the future	works only on human samples	maintains public dataset repositories
model organism expert	has collaborated with clinicians	follows ENCODE religiously	uses CRISPR/dCas9 for epigenetic editing	convinced nucleosome positioning is everything
annotates cell types manually	has a non-science hobby they talk about	keeps their lab notebook in LaTeX	suspiciously good at grant writing	uses zebrafish

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

keeps a physical lab notebook	suspiciously good at grant writing	posts conference selfies	histone modification researcher	started as a physicist
keeps their lab notebook in LaTeX	loves conference freebies	writes papers in Overleaf	coffee addict	runs marathons
has lived in 3+ countries	spends more time debugging than analyzing	maintains public dataset repositories	traveled/worked in Africa	uses 10+ color heatmaps in every figure
wears a tie	works with patient-derived organoids	speaks 3+ languages	makes memes about their field	brings lunch from home every day
uses dark mode for everything	has kids	believes RNA modifications are underrated	brings up TET enzymes often	convinced nucleosome positioning is everything

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

started as a physicist	has a non-science hobby they talk about	has lived in 3+ countries	presents with t-SNE plots routinely	believes non-coding RNAs are the future
works with patient-derived organoids	uses ATAC-seq routinely	wears lab coats even at the desk	writes papers in Overleaf	still uses Facebook
computational pipeline hoarder	studies chromatin remodeling complexes	brings up TET enzymes often	follows ENCODE religiously	quotes Waddington in presentations
coffee addict	first-gen academic	has a favorite coffee mug	ChIP-seq veteran	developed their own peak caller
vegan	believes RNA modifications are underrated	does yoga	uses AI for epigenetic feature prediction	loves conference freebies

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

developed their own peak caller	complains about batch effects daily	avoids cell culture at all costs	uses Hi-C data	bioinformatics heavy user
published 2 papers during PhD	DNA methylation enthusiast	brings their dog to lab	loves conference freebies	works best after 10pm
speaks 3+ languages	works only on human samples	argues about enhancer-promoter loops	annotates cell types manually	epigenetic clock developer
ChIP-seq veteran	has never used a pipette	advocates open science	talks about the roman empire too much	writes papers in Overleaf
always has a volcano plot in talks	single-cell epigenomics specialist	follows ENCODE religiously	has built a genome browser plugin	uses dark mode for everything

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

quotes Waddington in presentations	always has a volcano plot in talks	has a custom genome build	avoids cell culture at all costs	epigenetic clock developer
runs marathons	has a non-science hobby they talk about	works on frogs	DNA methylation enthusiast	studies chromatin remodeling complexes
brings lunch from home every day	first-gen academic	still uses Facebook	thinks bisulfite conversion is fun	believes RNA modifications are underrated
works only on human samples	uses methylome-wide association studies	makes memes about their field	works with patient-derived organoids	loves conference freebies
convinced nucleosome positioning is everything	works on transgenerational inheritance	has a favorite coffee mug	computational pipeline hoarder	bioinformatics heavy user

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

runs marathons	always has a volcano plot in talks	publishes in Nature Genetics	has a non-science hobby they talk about	has lived in 3+ countries
bioinformatics heavy user	model organism expert	brings up TET enzymes often	plays a musical instrument	maintains public dataset repositories
makes memes about their field	brings lunch from home every day	believes in 3D genome as the key	studies chromatin remodeling complexes	traveled/worked in Thailand
coffee addict	started as a physicist	uses methylome-wide association studies	epigenetic clock developer	complains about batch effects daily
loves conference freebies	has worked with ancient DNA	vegan	works on frogs	still uses Facebook

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

started as a physicist	uses 10+ color heatmaps in every figure	uses dark mode for everything	uses CRISPR/dCas9 for epigenetic editing	suspiciously good at grant writing
works on transgenerational inheritance	brings up TET enzymes often	runs marathons	always has a volcano plot in talks	still uses Facebook
complains about batch effects daily	works best after 10pm	uses zebrafish	has built a genome browser plugin	believes in 3D genome as the key
avoids cell culture at all costs	traveled/worked in Thailand	bioinformatics heavy user	regularly uses PCA, UMAP, and t-SNE	single-cell epigenomics specialist
uses methylome-wide association studies	talks about the roman empire too much	believes RNA modifications are underrated	follows ENCODE religiously	uses Hi-C data

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

vegan	model organism expert	has worked with ancient DNA	doesn't use social media	works only on human samples
uses methylome-wide association studies	suspiciously good at grant writing	always has a volcano plot in talks	brings lunch from home every day	keeps their lab notebook in LaTeX
argues about enhancer-promoter loops	still uses Facebook	speaks 3+ languages	keeps a physical lab notebook	runs marathons
regularly uses PCA, UMAP, and t-SNE	thinks bisulfite conversion is fun	gets excited about enhancers	works on transge nerational inheritance	published 2 papers during PhD
works on frogs	brings up TET enzymes often	plays a musical instrument	believes RNA modifications are underrated	coffee addict

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

suspiciously good at grant writing	has lived in 3+ countries	works only on human samples	argues about enhancer-promoter loops	ChIP-seq veteran
uses dark mode for everything	complains about batch effects daily	keeps their lab notebook in LaTeX	has a favorite coffee mug	has worked with ancient DNA
has kids	runs marathons	thinks bisulfite conversion is fun	uses 10+ color heatmaps in every figure	avoids cell culture at all costs
has a custom genome build	traveled/worked in Africa	wears a tie	believes RNA modifications are underrated	bioinformatics heavy user
speaks 3+ languages	still uses Facebook	spends more time debugging than analyzing	has a science-themed tattoo	vegan

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

works only on human samples	keeps their lab notebook in LaTeX	uses Hi-C data	model organism expert	studies chromatin remodeling complexes
histone modification researcher	has kids	convinced nucleosome positioning is everything	single-cell epigenomics specialist	uses dark mode for everything
suspiciously good at grant writing	regularly uses PCA, UMAP, and t-SNE	keeps a physical lab notebook	works with patient-derived organoids	wears lab coats even at the desk
has a science-themed tattoo	works best after 10pm	still uses Facebook	spends more time debugging than analyzing	has collaborated with clinicians
follows ENCODE religiously	always has a volcano plot in talks	first-gen academic	wears a tie	developed their own peak caller

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

works only on human samples	does yoga	argues about enhancer-promoter loops	has lived in 3+ countries	uses Hi-C data
developed their own peak caller	bioinformatics heavy user	histone modification researcher	annotates cell types manually	always has a volcano plot in talks
coffee addict	speaks 3+ languages	runs marathons	believes non-coding RNAs are the future	doesn't use social media
uses ATAC-seq routinely	avoids cell culture at all costs	philosophizes about science late at night	brings up TET enzymes often	epigenetic clock developer
publishes in Nature Genetics	traveled/worked in Thailand	bakes for the lab	traveled/worked in Latin America	ChIP-seq veteran

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

uses C. elegans	traveled/worked in Thailand	has a favorite coffee mug	spends more time debugging than analyzing	has lived in 3+ countries
works only on human samples	first-gen academic	philosophizes about science late at night	suspiciously good at grant writing	doesn't use social media
has worked with ancient DNA	annotates cell types manually	uses ATAC-seq routinely	follows ENCODE religiously	coffee addict
thinks bisulfite conversion is fun	traveled/worked in Latin America	works with patient-derived organoids	complains about batch effects daily	presents with t-SNE plots routinely
uses dark mode for everything	still uses Facebook	has kids	uses AI for epigenetic feature prediction	bioinformatics heavy user

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

annotates cell types manually	runs marathons	uses Hi-C data	studies chromatin remodeling complexes	gets excited about enhancers
has built a genome browser plugin	regularly uses PCA, UMAP, and t-SNE	thinks bisulfite conversion is fun	uses zebrafish	has a favorite coffee mug
works only on human samples	has kids	has a custom genome build	has worked with ancient DNA	complains about batch effects daily
loves conference freebies	keeps a physical lab notebook	talks about the roman empire too much	uses ATAC-seq routinely	brings their dog to lab
has lived in 3+ countries	suspiciously good at grant writing	uses 10+ color heatmaps in every figure	uses dark mode for everything	works with patient-derived organoids

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

studies chromatin remodeling complexes	still uses Facebook	convinced nucleosome positioning is everything	keeps a physical lab notebook	brings their dog to lab
traveled/worked in Latin America	uses Hi-C data	uses CRISPR/dCas9 for epigenetic editing	presents with t-SNE plots routinely	uses C. elegans
uses AI for epigenetic feature prediction	spends more time debugging than analyzing	tea-only person	annotates cell types manually	plays a musical instrument
histone modification researcher	follows ENCODE religiously	works best after 10pm	makes memes about their field	does yoga
writes papers in Overleaf	has a science-themed tattoo	loves conference freebies	argues about enhancer-promoter loops	has collaborated with clinicians

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

traveled/worked in Africa	works on transgenerational inheritance	complains about batch effects daily	speaks 3+ languages	philosophizes about science late at night
wears a tie	maintains public dataset repositories	published 2 papers during PhD	makes memes about their field	wears lab coats even at the desk
keeps their lab notebook in LaTeX	has a non-science hobby they talk about	has a favorite coffee mug	talks about the roman empire too much	works on frogs
works only on human samples	suspiciously good at grant writing	has worked with ancient DNA	has kids	uses 10+ color heatmaps in every figure
convinced nucleosome positioning is everything	model organism expert	traveled/worked in Thailand	still uses Facebook	argues about enhancer-promoter loops

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

believes in 3D genome as the key	traveled/worked in Thailand	brings up TET enzymes often	advocates open science	ChIP-seq veteran
tea-only person	brings lunch from home every day	has lived in 3+ countries	uses methylome-wide association studies	uses ATAC-seq routinely
histone modification researcher	maintains public dataset repositories	thinks bisulfite conversion is fun	coffee addict	uses Hi-C data
keeps their lab notebook in LaTeX	vegan	still uses Facebook	convinced nucleosome positioning is everything	studies chromatin remodeling complexes
annotates cell types manually	has kids	uses dark mode for everything	epigenetic clock developer	publishes in Nature Genetics

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

works best after 10pm	uses dark mode for everything	developed their own peak caller	vegan	believes in 3D genome as the key
avoids cell culture at all costs	always has a volcano plot in talks	bioinformatics heavy user	has built a genome browser plugin	suspiciously good at grant writing
keeps their lab notebook in LaTeX	uses Hi-C data	brings lunch from home every day	works only on human samples	uses methylome-wide association studies
annotates cell types manually	has kids	argues about enhancer-promoter loops	epigenetic clock developer	complains about batch effects daily
has collaborated with clinicians	has worked with ancient DNA	has a non-science hobby they talk about	coffee addict	works on frogs

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

brings lunch from home every day	spends more time debugging than analyzing	convinced nucleosome positioning is everything	epigenetic clock developer	believes RNA modifications are underrated
wears lab coats even at the desk	traveled/worked in Thailand	started as a physicist	has a non-science hobby they talk about	always has a volcano plot in talks
uses methylome-wide association studies	vegan	has kids	uses 10+ color heatmaps in every figure	works on transgenerational inheritance
computational pipeline hoarder	traveled/worked in Latin America	coffee addict	makes memes about their field	works with patient-derived organoids
uses CRISPR/dCas9 for epigenetic editing	publishes in Nature Genetics	believes in 3D genome as the key	maintains public dataset repositories	works only on human samples

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

doesn't use social media	DNA methylation enthusiast	uses C. elegans	believes non-coding RNAs are the future	first-gen academic
still uses Facebook	has worked with ancient DNA	developed their own peak caller	uses 10+ color heatmaps in every figure	uses dark mode for everything
publishes in Nature Genetics	uses Hi-C data	avoids cell culture at all costs	suspiciously good at grant writing	has kids
works only on human samples	annotates cell types manually	maintains public dataset repositories	works best after 10pm	quotes Waddington in presentations
uses AI for epigenetic feature prediction	brings lunch from home every day	ChIP-seq veteran	uses CRISPR/dCas9 for epigenetic editing	complains about batch effects daily

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

DNA methylation enthusiast	brings their dog to lab	uses Hi-C data	regularly uses PCA, UMAP, and t-SNE	tea-only person
has a non-science hobby they talk about	uses ATAC-seq routinely	always has a volcano plot in talks	works on frogs	works with patient-derived organoids
developed their own peak caller	brings up TET enzymes often	philosophizes about science late at night	bakes for the lab	wears a tie
uses 10+ color heatmaps in every figure	uses dark mode for everything	speaks 3+ languages	first-gen academic	works on transgenerational inheritance
has lived in 3+ countries	loves conference freebies	traveled/worked in Thailand	model organism expert	plays a musical instrument

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.

follows ENCODE religiously	single-cell epigenomics specialist	uses methylome-wide association studies	has a custom genome build	brings lunch from home every day
started as a physicist	coffee addict	works on transgenerational inheritance	uses Hi-C data	complains about batch effects daily
still uses Facebook	thinks bisulfite conversion is fun	works only on human samples	traveled/worked in Latin America	has never used a pipette
regularly uses PCA, UMAP, and t-SNE	brings up TET enzymes often	works with patient-derived organoids	works on frogs	avoids cell culture at all costs
keeps their lab notebook in LaTeX	wears a tie	uses 10+ color heatmaps in every figure	has a favorite coffee mug	uses AI for epigenetic feature prediction

Instructions

Each player gets a bingo sheet. The goal is to fill in a row, column or diagonal by finding colleagues who match the respective categories. When you find someone who matches a category, write their name in the corresponding cell. You will have time until 10:50.
If you finish early, you can talk to one of the organizers to get a new bingo sheet.
